## THIS MONTH'S TOPIC STEP INTO NATURE: WINTER EDITION

Winter can feel like a dreary time of year — it is often cold, and wet, and gets dark early. Many people struggle with winter blues. There's bleak weather and emotional letdown after the holiday season. There are many reasons people might struggle with mental health during the coldest, darkest months of the year. Weather conditions in combination with low mood can deter people from spending time outdoors. But resist the temptation to hibernate. Instead choose to go outside. It can help your body and mind.

There are many fun outdoor winter activities, from sledding in the snow to skating on ice. But simply going for a walk or taking your daily workout routine outdoors has advantages. You can take a stroll around the block or spend an afternoon exploring a trail at a local park. Exercising outdoors can add variety to

your routine and help you feel even better.

Exercise in general is known to help reduce stress and promote emotional regulation. Exercising outside has the added benefit of regulating sleep-wake cycles. That can help our bodies feel ready to sleep at night and wake in the morning. Many people experience disrupted sleep cycles in winter because of prolonged darkness and fewer hours of sunlight. To reset your body's sleep-wake cycles, try spending time outside in the morning after the sun has risen or in the afternoon before the sun goes down. Limit intense physical activity and screen time in the last two hours before bed. Instead, opt for calming activities like reading, crafting, stretching, meditation, puzzles, or talking with a family member or friend.

Exposure to natural sounds like birds chirping, rustling leaves, and the blowing wind can also help lower blood pressure and reduce negative thoughts. Exercise outside in places with reduced noise pollution and access to natural sounds. This can help your brain process your emotions more easily and regulate your breathing. The Japanese practice of forest bathing, or spending quiet time in heavily wooded areas, emphasizes the importance of time immersed in nature. Those who practice regularly often have lower stress and blood pressure and more stable blood sugar levels.

If you struggle with brain fog and staying on-task in the winter months, breathing in cold, brisk air is also good for mental stimulation, concentration, and mental focus. If you spend lots of time indoors at work in the winter, take breaks outside or walk around your building to help sharpen your focus.

**When exercising outdoors, always remember to dress for the weather:**

- Wear layers to prevent overheating and allow for temperature regulation. Choose wicking layers closest to your body that will pull moisture away from your skin to keep you dry.
- When the air is especially cold or windy, limit your skin exposure. Keep your hands and head covered. Wear a hat, hood, or ear warmers, and gloves.
- Remember your feet. Wear warm, dry socks, and shoes or boots with good grip and traction to prevent slips or falls.
