## THIS MONTH'S TOPIC SAVE YOUR VISION

**M**arch is "Save Your Vision Month" in the United States. This is a timely reminder to all of us to make good choices regarding our eye health. Experts estimate you can prevent half of visual impairment and blindness through early diagnosis and treatment. Making time for preventative care is an important part of taking care of our eyes.

Many people do not realize that eyesight can get worse over time. Because of slow changes, it can be difficult to tell if your eyesight has changed until you have an eye exam.

All people should have a basic vision screening annually as a part of an overall wellness exam. The Centers for Disease Control and Prevention recommends people older than 60 receive a dilated eye exam, performed

by an optometrist or ophthalmologist, every two years. You should also make an appointment to have your eyes checked if you have any of the following:

- Decreased vision
- Draining or redness of the eye
- Eye pain
- Double vision
- Floaters (tiny specks that appear to float before your eyes)
- Circles (halos) around lights
- Flashes of light

If you are referred to an optometrist, a doctor who specializes in eye care, make sure to schedule and go to that appointment. You should follow any recommendations they give you. Glasses or contact lenses, or even eye surgery, can help restore many people's eyesight, or help them see better than they ever could before.

**Other ways to protect your vision include:**

- Eat a healthy diet, including leafy greens such as spinach or kale, and maintain a healthy weight.

- Know your family's eye health history.
- Wear sunglasses that block out 99% to 100% of UV-A and UV-B radiation (the sun's rays).
- Quit smoking or don't start.
- Wear eye protection such as specific kinds of glasses or goggles when operating machinery, working outside or around small particles that could get in your eyes and cause problems.

If you find that your eyes feel tired after you spend a lot of time focusing on one thing, such as a computer screen, try using the 20-20-20 rule. Every 20 minutes, look away about 20 feet in front of you for 20 seconds to reduce eye strain.
