## SPOTLIGHT ON ... CANNING BASICS

Canning education is a necessity to prevent spoilage and botulism. Botulism can be controlled in home-canned foods if home canners are aware of the dangers and take steps to prevent it. In an effort to minimize the incidence of botulism in home canning, the McLean County Extension agent for Family and Consumer Sciences taught six canning education programs to 43 participants. Among the program's results: 100% of participants learned new techniques and/or skills required to safely preserve canned food; 50% shared their new knowledge with family, a friend or a neighbor. Follow-up evaluations indicated that the participants canned a total of more than 750 jars of produce last year.
Housing has long been recognized as a basic human need. Yet, because housing is often a family’s largest expense and largest debt, it can be a stumbling block for many. Safe, lower-cost housing options are often limited for struggling families, and this can lead them into crisis. Family and Consumer Sciences Extension helps people improve home safety, lessen their environmental footprint, and strengthen financial stability. It also helps communities promote healthy lifestyles throughout the lifespan by supporting strong family home environments. Please tell us ways you think we can do more.

**AVAILABILITY**

In 2010, in McLean County, there were…
- **829** renter households
